CRAFTSMAN® Reserve-Power Multi-speed 3/8-inch Drill with Dial Speed Control

Motor develops 3/4 HP. Ball and needle bearings throughout for longer life. Don't confuse it with multi-speed drills that have to reduce power to get lower speeds. In this drill, a special silicon-controlled rectifier automatically feeds in more power to maintain full torque, even when drilling through heavy load materials like iron, steel and masonry that require low drilling speeds.

You can dial any speed between 1000 and 2000 rpm. This permits you to select the speed and bit size recommended for each material by the convenient

reference chart mounted on the drill. Bits last longer when you use the right speed for the job.

Double reduction gears for steady power. Polished aluminum housing is sectional type for extra strength. Minimum chuck offset for getting into tight places. Locking trigger switch with safety release. Removable side handle for sure two-hand control. 9 3/4 inches long. 8-foot 3-wire cord and adapter included. 110-120-volt, 60-cycle AC. UL listed.

Kromedge® Saw Blades

Stay sharp up to 5 times longer than ordinary blades . . .
outlast, by far, all synthetic-coated blades

Made from extra-tough chrome-nickel-molybdenum saw steel, tempered under pressure, evenly tensioned to run true and reduce wobble to a minimum. Then blades are precision-ground for perfect balance . . . and finally hard-chrome plated to produce super-hard surfaces that resist rust, build-up of gum and pitch.

Sears exclusive "Free-Smooth Cut" and "Free-Cut" blade designs for exceptional sawing efficiency

1 "Free-Smooth Cut" Combination Blade. Deep hollow ground for freer cutting . . . stabilizer slots and holes give free, accurate and quiet operation even in tough wood, plastics. Prevents warping and distortion from heat.

Extra-heavy center for stability . . . helps blade give "glue-joint" cuts (need no sanding). For fine-finish woodwork, ripping, crosscutting, mitering. Teeth need no set. $\frac{5}{8}$ - $\frac{1}{2}$ -inch hole* . . . except 10 and 12-inch have $\frac{3}{4}$ - $\frac{3}{8}$ -inch hole*.

CRAFTSMAN® CARBIDE-TIPPED BLADES

Outlast non-tipped blades 20 to 1

Tungsten carbide is one of the hardest cutting materials made by man. That's why these blades cut so fast . . . stay sharp so long

Low as **\$8.19** 6½-inch diameter

The cost of one CRAFTSMAN carbide-tipped blade is just a fraction of what you'd spend for the many non-tipped blades you would use during the life of your carbide-tipped blade. Cut smoother, feed more evenly. Take less power than regular blades.

Kromedge® blades treated to resist rust and build-up of pitch and gum. Rip, cross-cut, miter and bevel. Cut woods, most plastics, Masonite Presdwood, Formica® and other laminated plastics, asbestos, thin brass, aluminum, wall-board. (Not for masonry or ferrous metals.) Width of cut is about $\frac{1}{8}$ inch.

Get fast, accurate heat selection and setting with Sears exclusive COLOR-MATIC Continuous Control

One operation determines and sets the exact heat needed for the job. Just turn lever to position on dial that matches color code and size of electrode being used... and you're ready to weld.

CRAFTSMAN® AC Arc Welders

30 to 180 amperes **\$122⁹⁵** | 40 to 230 amperes **\$132⁹⁵**

Run on a 100% duty cycle in more heats than any other welders we sell thanks to fiber glass insulation on all aluminum windings. This means you get much greater heat resistance with less chance of overload at all heats

Ideal for repairing farm machinery, bending metal, auto body shop work, metal sculpturing. That's because you can select any heat within welder's range. And the continuous control lever takes out all the guesswork by selecting the right heat quickly, accurately. Positive cam locks lever in place to prevent variation in heat. Color-coded electrode instruction book tells how to match dial, electrodes for special jobs... stores in pocket on welder front.

In addition, you get powerful and full-strength pickup from empty to full tank-container because of direct-line air flow. Debris or liquid by passes motor, falls directly into tank-container—can't reduce suction or re-circulate through the motor.

Also, as a result of this unique system, "clean" dirt-free air blows through the motor fans. This, plus independent motor cooling, lengthens the life of the motor.

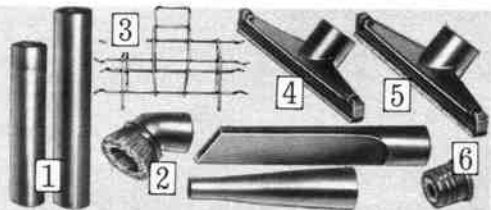

Guaranteed 1 full year.

CRAFTSMAN® Cabinets and Chests.. built tough TOP TO BOTTOM!

One-piece reinforced top and bottom of heavy gauge steel for greater load capacity without sag or loosening at the welds

Rugged, steel-bar locking mechanism... when chest lid or cabinet panel is closed drawers lock automatically for security

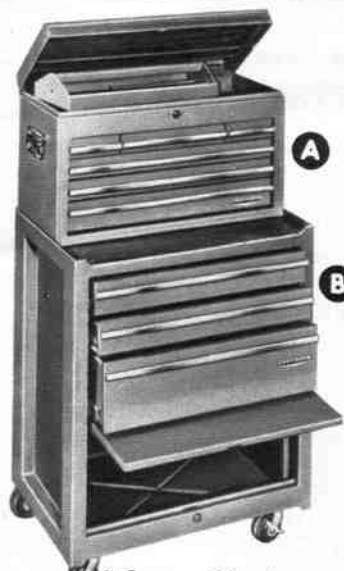

One-piece, roll-formed slides on ALL drawers for smooth, easy action... won't give or twist even when fully loaded

These EXCLUSIVE features in all Cabinets

- 1 "I-Frame" construction has nearly 50% more diagonal strength than ordinary designs... no crossbars—more usable space.
- 2 Drawer slide carriers are welded to frame on three separate panels with more welds than ordinary construction.
- 3 Cabinets with lower compartments have panel that "pops out" with the turn of a key. Tumbler lock is in base... can't hamper panel.
